SUMMARY

Aspiring software engineer from Queens College (3.93 GPA) with hands-on experience building games and teaching coding. Combines strong algorithmic understanding with a focus on user experience across software projects. Seeking a software engineering role to apply technical skills gained through coursework and independent development.

EDUCATION

Queens College CUNY, Flushing, NY
Computer Science BA

Graduated May 2026

- 3.93 GPA.

Bernard M. Baruch College CUNY, New York, NY
Computer Information Systems BBA

Transferred in January 2023

- 4.0 GPA.

HONORS & AWARDS

- Phillip Drummond Memorial Award, in recognition of outstanding scholarship 2026
- Presidential Scholar (Queens College) 2024 and 2025
- Dean's Lists (Queens College) All semesters from Spring 2023 to Spring 2026
- Dean's List (Baruch College) Fall 2022

PROJECTS

Manga Downloader Web Application

- Built a Node.js web server from scratch using core HTTP/HTTPS modules, handling routing, query parsing, and chunked streaming responses without any frameworks.
- Implemented Google OAuth 2.0 authorization flow including state validation, token exchange, and Google Drive API integration to upload downloaded content directly to a user's Drive; As well as integrated the MangaDex REST API to allow users to search, paginate, with modular page templating and dedicated error handling for invalid input and failed requests.
- Optimized page delivery using multipart uploads and concurrent recursive downloads to efficiently transfer manga pages from MangaDex servers to Google Drive.

Demo 2D Platformer

- Developed a 2D action platformer in Godot using GDScript, featuring sprite animations, player movement, directional projectile combat, and an invincibility frame system.
- Architected enemy types using inheritance, extending a base enemy class into specialized variants with overridable behaviors; utilized signal-based architecture to apply decoupling and event-driven programming logic.

CLI games in C++

- Blackjack: Modeled Player and Dealer as classes with encapsulated betting logic, hand evaluation, and AI decision-making based on dealer visibility and card values. Rendered an animated CLI card table with Unicode, displaying real-time player actions, chip counts, and face-down/face-up card states.
- Poker: Features a full hand evaluator that detects combinations from high-card through straight-flush for win condition resolution. With a probabilistic AI system where each opponent has unique attributes that influence betting behavior dynamically based on pot size and cards revealed.
- Minesweeper: Utilized dynamic memory allocation for variable board sizes, applied using a recursive flood-fill algorithm to clear connected empty tiles on reveal.

TECHNICAL SKILLS

Computer Languages: C++, Java, JavaScript, HTML, CSS, MySQL.
Applications: VS Code, Git, Vim, Godot Engine, Blender.
Creative Design: UI/UX Design, 3D Modeling, Game Development, Illustration.

EXPERIENCE

Queens College CUNY, Tech Incubator, Flushing, NY
Intern; Project and Administration

November 2023 - Present

- Assist in administrative tasks, responding to inquiries, maintaining records, and providing technical support.
- Support the day-to-day operations of the Tech Incubator program and its members.
- Help organize and coordinate hackathons, workshops, and networking events.

York College CUNY, STEP Program, Jamaica, NY
Course Instructor

March 2025 - May 2025

- Hosted and educated a class of 10 high school students on Zoom on Video Game Programming.
- Guided students in navigating software and learning coding concepts such as Object Oriented Programming.
- Created a complete 2D platformer game from scratch for students to utilize.
